Continuation of 10. Other: Applicants state Kuhn et al. fail to teach capillary force moving the fluid sample. Kuhn et al. teach in column 3 lines 14+ wicking characteristics that have been read on the claimed capillary action. Further, column 4 lines 31 specifically teach capillary action.

Applicants state Kuhn et al. fail to teach a hydrophilic region adjacent to a hydrophobic region. Column 4 lines 40+ teach impermable area which has been read on the claimed hydrophobic region that is adjacent to a hydrophilic region (see claims 1 and 4).

Applicants state the rejection of record fails to address the limitations of claims 2-3,6 and 12. The Office maintains Kuhn et al. teach an indistinguishable structure from that claimed (e.g. hydrophilic zones adjacent to hydrophobic zones) and inhernetly meet these limitations.
